

NMX30 Infrastructure Global

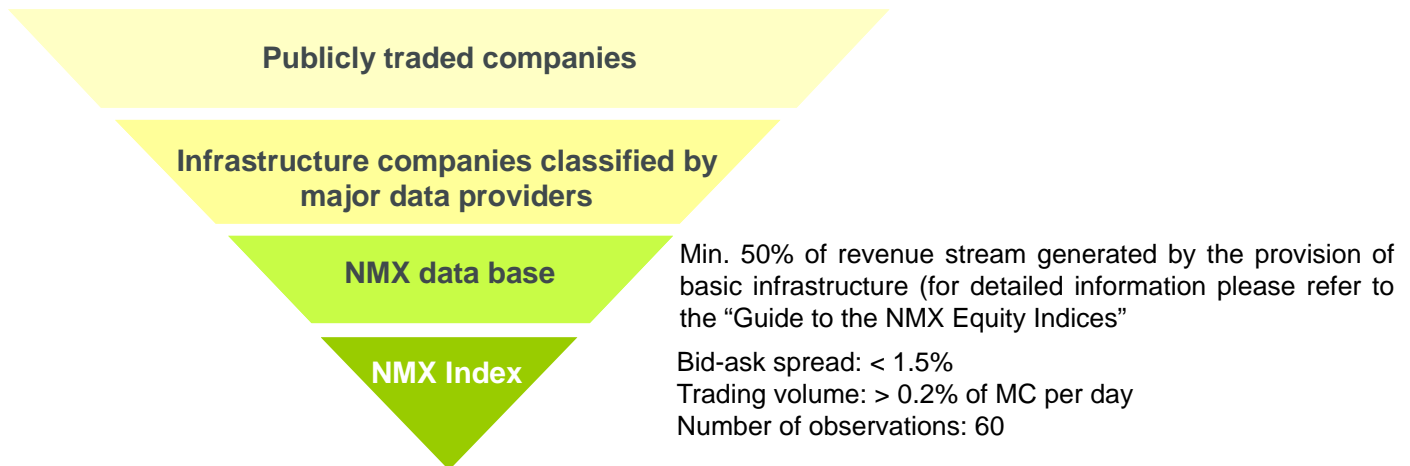

February 26, 2010

Characteristics

The NMX30 Infrastructure Global provides liquid and tradable exposure to 30 companies around the world which provide basic infrastructure facilities. These companies are natural monopolies with predictable and stable cash flows due to the underlying business model (long duration of concessions, goods and services provided etc.). Basic infrastructure companies have a protected market position due to their cost structure (high sunk cost and decreasing average cost). The low technology risk and inelastic demand of the goods and services provided translate in a comparatively low correlation to other asset classes and a linkage to long term GDP growth. The NMX30 Infrastructure Global is well diversified across regions, sectors and currencies. The universe of the NMX index family is based on the following infrastructure subsectors: toll roads/bridges, airports, ports, pipeline networks (water, gas, oil) and communication networks.

Index Methodology

A half-yearly analysis is conducted to rebalance the index composition in accordance to the "Guide to the NMX Equity Indices", which describes the index design and index calculation methodology and selection process. Eligible companies for inclusion in the NMX base universe show a minimum basic infrastructure (network) revenue contribution of at least 50%. The index is rebalanced as of June and December.

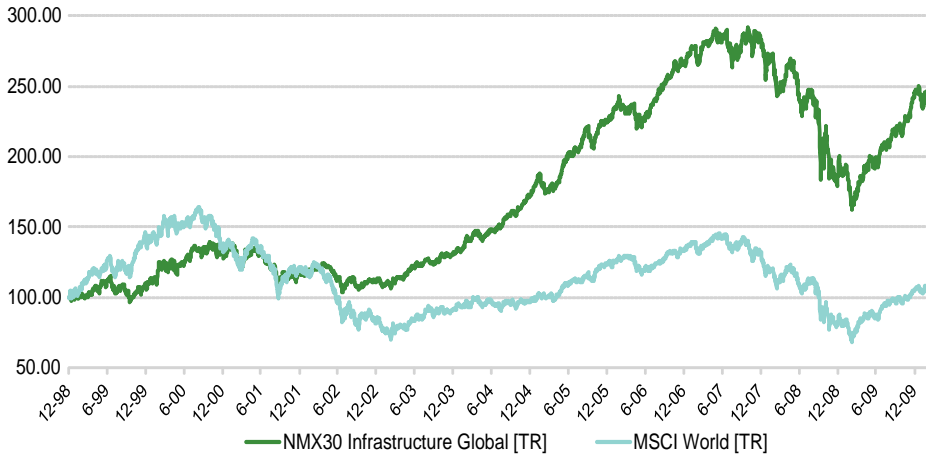

Index Calculation

The NMX index family is calculated and published by LPX Group which is a dedicated research house and index provider for listed alternative asset classes. LPX Group stands for excellence in the field of listed alternative investment research and the promotion of listed alternative asset classes. The LPX and NMX indices are innovative benchmarks for the listed private equity and infrastructure asset class and widely used in the financial industry as benchmarks and as underlying for a wide array of tailored financial products.
